The Friendliest Installers in the South-West

At Solidarity Solar our aims are to help our customers towards a sustainable future and genuinely care about the quality of products we use for our installs. We never sell you equipment you don't need and will always advise to the best of our ability. No hard sell or pushy sales tactics ever. We take pride in our work and do our best to make sure that we meet, or exceed, our customers' expectations.

Repairs Over Replacement

We approach every aspect of our business with sustainability in mind. That's why we believe it's always worth trying to fix a system before outright replacing it, wherever possible – it requires fewer materials and is easier on the planet, as well as your wallet! If another company tells you that your system needs to be replaced, just give us a call and we'll see if we can repair it first.

Our values

More than 3000 users have been helped by World Online Course.

Customer Care

We're here to help you with solar panel installation in Devon and Cornwall. If we were to sum ourselves up in a few words, those would be "reliable, honest and friendly." We find our customers agree! We're with you from the start of the project to the finish.

Price

As I'm sure you'll have seen, solar systems don't tend to come cheap. Our aim is to make solar power accessible to everyone, so we price ourselves in a way that makes solar energy more affordable. We're focused on helping you and on helping the environment, rather than on turning a profit.

Sustainability

As we've said, we do this because we truly care about the planet and about seeing people embrace a greener, more eco-friendly approach to power. The world of green energy can be jargon-filled and opaque, so we want to help educate people on the big and little things they can do to protect our planet!
